

# Index for Workbook 20

|                                    |            |                                |        |
|------------------------------------|------------|--------------------------------|--------|
| Beam _____                         | 52         | Masses on spring _____         | 47     |
| Buffer _____                       | 39         | Output signal _____            | 64     |
| Capacitor _____                    | 49         | Partial fractions _____        | 19, 60 |
| Causal function _____              | 2-10       | Ramp function _____            | 12     |
| Completing the square _____        | 22         | Second shift theorem _____     | 25     |
| Convolution _____                  | 56         | Shift theorem - first _____    | 20     |
| Convolution theorem _____          | 59         | - second _____                 | 25     |
| Cramer's rule _____                | 48         | Sifting function _____         | 33     |
| Deflection of a beam _____         | 52         | Sifting property _____         | 32     |
| Delayed step function _____        | 17         | Springs _____                  | 47     |
| Delta function _____               | 30, 32     | Spring - damped _____          | 39     |
| Derivative, transform of _____     | 27-28      | Step function _____            | 6      |
| Differential equations _____       | 34-54      | System response _____          | 71     |
| Electric circuit _____             | 36, 44, 49 | Systems of ODEs _____          | 40     |
| First shift theorem _____          | 20         | Transfer functions _____       | 63     |
| Gauss elimination _____            | 48         | Transform _____                | 3      |
| Heaviside function _____           | 4          | Vibrating system _____         | 47     |
| Impulse function _____             | 30         | Young's modulus _____          | 52     |
| Input signal _____                 | 64         | EXERCISES                      |        |
| Inverse Laplace transform _____    | 18         | 10, 17, 23, 30, 33, 38, 43, 62 |        |
| Inverse second shift theorem _____ | 26         | ENGINEERING EXAMPLES           |        |
| Kirchhoff's law _____              | 49         | 1 Charge on a capacitor _____  | 49     |
| Laplace transform _____            | 12         | 2 Deflection of a uniformly    |        |
| Laplace transforms table _____     | 15         | loaded beam _____              | 52     |
| Linearity property _____           | 14, 18     | 3 System response _____        | 71     |
| Linear systems _____               | 64, 67-70  |                                |        |
| Linear system solution _____       | 65         |                                |        |
